DETAILED ACTION

Applicant's amendments/arguments, filed 6/29/04 and 8/26/04, have overcome the 112 rejection's listed in the last office action, dated 3/2/04.

Allowable Subject Matter

Claims 24-46 are allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance: With respect to independent claim 24, the prior art of record does not disclose nor suggest in combination with the remaining aspects of the claim, a miniaturized terahertz radiation source based on the Smith-Purcell effect, wherein the field emitter, the electrostatic lens, the beam deflector, the grating of metal and the anode are integrated on a semiconductor chip using one of additive and nanolithographic methods, and wherein from a focused electron source, a high-energy bundle of electrons is transmitted at a defined distance over a reflection diffraction grating having transversely disposed grating rods so that in response to an image charge oscillating within a profile of the reflection diffraction grating an electromagnetic wave of a wavelength is emitted and is adjustable as a function of a periodicity of lines and of electron velocity. Since this aspect is not disclosed nor taught in the prior art of record independent claim 24, and dependent claims 25-46 which also incorporate this aspect are deemed allowable over the prior art of record.

Applicant's arguments, see amendments/arguments, filed 6/29/04 and 8/26/04, with respect to 24-46 have been fully considered and are persuasive.
